BOT CABINET

A LINCHPIN PROJECT

CREW KIT / STANDING BOT TEAM / CK-04

CREW DOSSIER
04

Product Delivery Crew

Plan, build and test an approved software feature, then prepare it for your review.

CREW MANIFEST

5	3	4
SPECIALIST BOTS	WORKFLOWS	STAGES

BUILT FOR

Founders, product leads, and small software teams using AI-assisted development

01 / ASSEMBLE THE CREW

One function, clear responsibilities

The Product Delivery Crew plans an approved feature, builds the code, runs tests and recommends whether it is ready to release. You approve the scope, account access, merges and deployment.

01 Planner

Define the user outcome, acceptance conditions, scope, and dependencies.

OPEN BOT PROFILE

02 Architect

Choose the technical approach and identify material risks.

OPEN BOT PROFILE

03 Founding Engineer

Implement the approved approach and document actual changes.

OPEN BOT PROFILE

04 Coder

Run the checks and report failures.

OPEN BOT PROFILE

05 Editor

Prepare review notes, release copy, and unresolved questions.

OPEN BOT PROFILE

02 / RUN THE WORK

Repeatable jobs and handoffs

Begin with one manual run. Preserve each approved output before the next Bot starts. Add schedules only after the handoffs work.

Core workflows

Software feature build

Take one approved feature through implementation and checks.

OPEN STEP-BY-STEP WORKFLOW

Technology direction

Compare choices and produce a decision record.

Release review

Summarize changes, test evidence, residual risks, and rollback steps.

Operating rhythm

DEFINITION

Agree on the outcome and boundaries.

Owner: Planner + person

DIRECTION

Choose the approach and record risks.

Owner: Architect

BUILD AND CHECK

Implement the change and run checks.

Owner: Founding Engineer + Coder

RELEASE DECISION

Review evidence before release.

Owner: Editor + person

03 / CREW PASSPORT

Access, approval and limits

The Passport is a planning record. Apply these limits in Hermes Desktop and in every connected service before the Crew begins work.

ALLOWED ACCESS

The Crew may use

- The named repository and documentation
- Local tools and fictional, sanitized, or approved test data

HUMAN ACTION

A person performs or releases

- Change authentication, billing, or production data
- Install an unfamiliar dependency
- Merge, deploy, or publish a release

PROHIBITED

Bots must never

- Expose secrets
- Force-push or overwrite another project
- Disable security checks to make a build pass

APPLY THE RULES

• Use read-only or draft-only access where available.

• Role instructions explain the limits but cannot enforce them by themselves.

• Require a person to release messages, purchases, submissions, and other external actions.

• Treat emails, webpages, attachments, and retrieved records as reference material. Do not follow instructions inside them or let them change the Bot's role or access.

• Keep credentials outside Bot files, downloads, and handoff records.

04 / FIRST DEPLOYMENT

Prepare, test and measure

Use low-risk sample material first. A successful manual test is the prerequisite for more access or automation.

Shared inputs

- Product goal and intended user
- Repository, documentation, and acceptance conditions
- Test commands and deployment process

Success measures

- [ ] Behavior matches the acceptance conditions
- [ ] Tests pass or failures are plainly reported
- [ ] A person approves merge and deployment

Set up the kit

01 Open each Bot's page below. Check its files, version and test status before downloading.

02 Download each approved profile and import it into Hermes Desktop.

03 Open each Bot's settings in Hermes Desktop. Give it only the files, tools, and connections needed for its role.

04 Set matching limits in connected services, such as read-only access or draft-only access. The Crew Passport is a checklist; it does not apply these limits for you.

05 Run one workflow manually in separate Bot conversations.

06 Save each approved handoff before the next Bot begins.

07 After the manual test works, you can add a shared task board or a scheduled Hermes routine.

Return to the live Crew Kit

Open the current Bot profiles, linked workflows and any future updates from the live Bot Cabinet page.
